

Javier Alejandro Zárate Suárez

Taller 1

1. Traduzca a Kotlin las siguientes ecuaciones matemáticas

a. $S = \sqrt{\frac{(X-m)^2}{n-1}}$

$S = \text{Math.sqrt}(\text{Math.pow}((x-m), 2.0) / (n-1))$

b. $P = \frac{-(y^3 - 1)}{(y+1) - \sqrt{y+1}}$

$P = -(\text{Math.pow}(y, 3.0) - 1) / ((y+1) - \text{Math.sqrt}(y+1.0))$

c. $Z = \frac{x(x^2 + 1)^3}{\sqrt{2x^2} + 1}$

$Z = x * \text{Math.pow}(\text{Math.pow}(x, 2.0) + 1, 3.0) / (\text{Math.sqrt}(2.0 * x) + 1)$

d. $T = 1 - \frac{\sqrt[3]{x-2}}{x^3}$

$T = 1 - (\text{Math.sqrt}(x-2.0, 3) / \text{Math.pow}(x, 3.0))$

e. $S = ((x \neq y) \wedge (x \leq y))$

$S = ((x != y) \&\& (x <= y))$

f. $S = ((a \geq b \cdot c) \vee (b \leq c))$

$S = (a >= b * c) || (b <= c)$

2. Evalúe paso a paso las siguientes expresiones matemáticas

a. $30 + 8 * 3 / 6 - 4 \% 6$
 $30 + 24 / 6 - 4 \% 6$
 $30 + 4 - 4 \% 6$
 $30 + 4 - 4$
 $= 30$

b. $30.0 / 20.0 - 2.5 * 3.0$
 $1.5 - 7.5 * 3.0$
 $1.5 - 7.5$
 $= -6$

c. $8 / 4 / 2 * 6$
 $2 / 2 * 6$
 $1 * 6$
 $= 6$
